

Environmental, Social and Governance Data Management

Challenges We Solve

- ✓ We save you the time and effort of sourcing and managing ESG data as we proactively on board ESG providers
- ✓ We provide the linkages across asset types and issuers to facilitate working across disparate data sets, a core challenge faced by many firms attempting to get a holistic ESG picture
- ✓ We can follow your rules to create scores or ratings and provide them in the format required for easy ingestion removing the technology and software costs from your environment
- ✓ We can provide the data in ready to use feeds or we provide access via API, for example with Python, enabling ESG model back testing and implementation to be as dynamic as possible.

Environmental, Social and Governance (ESG) Investing is Going Mainstream

Responsible investing is increasingly seen as the way to both mitigate risk and to improve long-term returns. The challenge for everyone is how to source, analyze and implement the environmental, social or governance data required to invest responsibly and maximize returns.

There is much argument as to what constitutes ESG investing and regulations are still concentrated in specific industries or regions. At the same time, there are an increasing number of data providers supplying ESG ratings or scores, the underlying ESG fundamental metrics and ESG style indexes, any of which might be an important ingredient in an ESG investment strategy. Sourcing, normalizing and implementing this data for research and analysis, investing and reporting is both time consuming and resource intensive.

Rely On RIMES

More and more buy-side firms are now looking to RIMES Managed Data Services to support their entire data universe from source to system – including their intake, validation and internal distribution of ESG data, alongside critical benchmark, reference, pricing, client, ETF and alternative data sets.

RIMES sources data from the leading ESG data providers, including ESG scores and ratings and ESG factor indexes, as well as the raw data sets that firms utilize to create their own scores which are then used consistently across their investment, distribution and operational functions.

As a proven Managed Data Service, we can manage your ESG data needs across multiple sources, cross-referencing and linking securities to issuers across asset classes, applying rules, enriching or calculating scores to provide data fit for purpose and ready to use in your research and investment process.

Partnering with RIMES gives you:

- Fast and efficient access to global ESG data from multiple providers
- Access to RIMES expertise to discuss the solution most suited to your needs
- A proven ability to provide a service that allows you to concentrate on using the data, not managing it.
